In this randomized, double-blind, placebo-controlled, multicenter study of 410 adults with schizophrenia or schizoaffective disorder, aripiprazole was more effective than placebo in relieving positive and negative symptoms and in improving the general functioning of the patients, and it was generally well tolerated. For the most part, adverse events occurred at similar rates for the 2 study groups. The most common adverse events in the aripiprazole group were headache and drowsiness, and in the placebo group, they were insomnia and somnolence. Serious adverse events in the aripiprazole group occurred in 8 (2.3%) patients and in 3 (0.8%) patients in the placebo group. There were no deaths. The University has more than 50 recycling drop-off locations across campus, all free of charge. Recycling bins are placed in areas throughout campus where students can deposit their recyclables. Cleaning and maintenance staff handle the recycling at these locations. They collect the paper, cardboard, plastic, batteries, light bulbs, textiles, wood, cans and metals, and deliver them to recycling centers. Consistent, everyday recycling helps the environment because when properly processed, recyclables can be reused over and over again. While Wisconsin residents are required to pay a state license fee to process recyclable materials, the fees are not a significant portion of the value of the materials. For example, \$10 can cover the cost of processing 1 ton of waste. Be part of saving the environment. All it takes is one small act to make a difference. We encourage students to be more environmentally friendly on campus, through recycling, and in their day-to-day lives.Q: Achieving complete coverage using test doubles I've got a low level library that is using a high level library to perform some function.
