this is the link i have been working on, any help would be greatly appreciated. A: If you open the developer console you can see there is some network error. I guess it is something with http, as it doesn't even work with localhost.

I believe your requests have the port but not the host. Q: Basic datetime parsing problems I'm parsing a date from an RSS feed which is in UTC. The date format is 'EEE, dd MMM yyyy HH:mm:ss ZZZ' (notice no time). I'm using strptime in Python 3: `datetime.strptime('Tue, 19 Jun 2012 15:07:55 +0000', '%a, %d %b %Y %H:%M:%S %Z')`

When I print the datetime, it says it's still in UTC, and timezone is correct when I print it. I think this is a bug in the strptime function. What am I doing wrong? A: There's no bug. strptime is interpreting the '+0000' as a literal time zone and adding it to the local time to make a UTC

datetime. '+0000' is not a time zone; it's an offset from UTC. You can get the correct answer by adding '00:00' to the end of your string instead. Q: An integral inequality with weighted sums I am looking for some help with the following integral inequality: Let $\{x_j\}$ and $\{y_j\}$ be two sequences, and let μ be a positive number.

Consider the following integral:
$$\int_0^{\mu} \left(\sum_{j=1}^{\infty} a_j \right)$$
